

1. Name 5 different Bootstrap components and describe how they work.

1. Nav bar: creates an area like a header that allows you to include links, buttons, drop down menus and more.

2. Pagination makes it very clear to the user where they are in a site by illustrating the pages in a line of boxes with arrows that allows the user to pick a page or use the arrow to advance or move back.

3. Drop down menus allow a compact option for displaying options that relate to a single subject, upon hovering or clicking the user can see a list of options that normally stay hidden from sight

4. Forms make a very convenient way to create an organized structure to receive data from the user

5. Tables make a great way to organize information to present to the user

2. How does the Bootstrap grid system work?

Bootstrap grid system works by arranging data in rows and columns whose size is designated on a base 12 system. Where, 6 is half 3 is a quarter, 2 is 1/6th, and so on.

3. What is your favorite thing you learned this week?

Using the grid system to arrange the items in your web page to create a page
